KØBENHAVNS UNIVERSITET

Programme

- **Introduction to Mendeley Reference Manager**
- **Import of references**
 - Import references from different databases and make a collection (folder)
 - Exercises
- **Mendeley Cite** (Mendeleys citation tool)
 - Make a bibliography
 - Choose citation style
 - Exercises
- **Possibility to do more exercises or to try on your own**

What is Mendeley Reference Manager

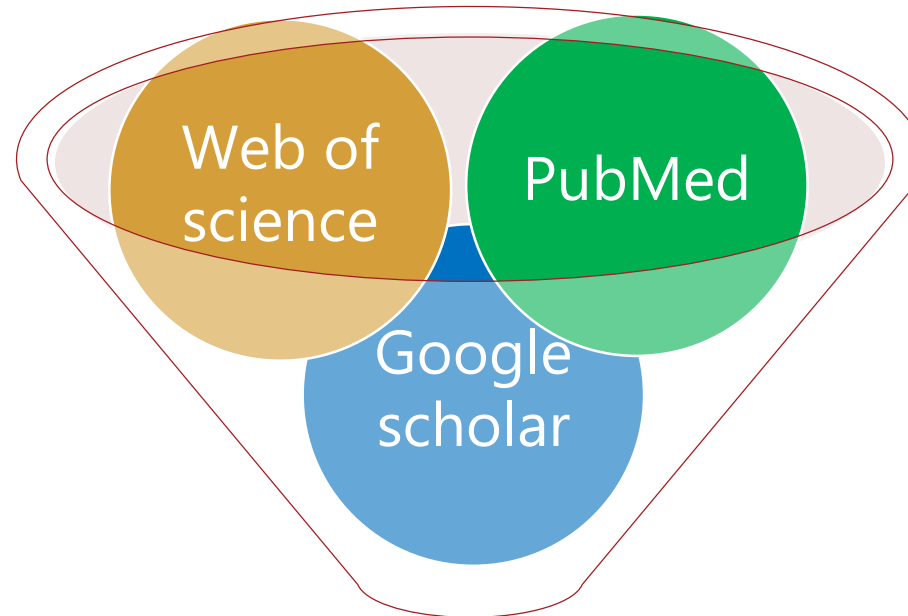

Reference management programme

- You have all the references in one place
- You can organize them into folders and groups
- You can make your referencelist in word or Open Office, while you are writing your paper
- You can share your references with others and write papers together

Free application (2GB data available with a possibility to buy more)

Up to 25 people in a group

Pdf reader with the ability to make notes

Mendeley Reference Manager

Mendeley Cite in Word

Importfilter
(RIS)

The Basics

Mendeley App / Mendeley Web - download the app Mendeley Reference Manager from www.mendeley.com. The app and the web usually synchronizes automatically, but it can be a good idea to synchronize when you close the app

WebImporter - import of single references or web pages

Mendeley Cite - installation for Word to keep track of references while typing

Citation Styles - determines what references look like in the assignment

Mendeley Reference Manager

The screenshot shows the Mendeley Reference Manager interface. Red boxes and arrows highlight key features:

- Menu:** Points to the top navigation bar containing 'Library' and 'Notebook' tabs.
- References:** Points to the main table of references.
- Filter:** Points to the 'Filter by' dropdown menu, which is currently open, showing a search bar and a list of authors.
- Folders:** Points to the 'COLLECTIONS' section on the left sidebar, which lists 'Alpaca', 'Ovis Aries', and 'protein ubiquitination'.
- Groups:** Points to the 'GROUPS' section on the left sidebar, which lists 'Alpaca' and 'Alzheimers'.
- PDF's:** Points to the PDF icon in the bottom right corner of the reference table.

The reference table contains the following data:

The tiger is one of many species in which individuals can be identified by surface patterns. Camera traps can be used to record individual tigers moving over an array of locations and provide data for monitoring and studying populations and devising conservation strategies. We suggest using a combination of algorithms to calculate similarity scores between pattern samples scanned from the images to automate the search for a match to a new image. We show how using a three-dimensional surface model of a

and when each was photographed. But as the photo-id catalogue grows with population turnover and immigration from adjacent sites, the effort required to search the entire catalogue for matches to each new image becomes excessive. The number of visual comparisons required can be reduced substantially by calculating similarity scores between each new image and the images by which existing individuals are represented in the catalogue. Visual comparisons can then be restricted to those individuals for which the maximum score exceeds a threshold value, as exemplified by the work of Kelly (2001) for cheetahs and Karlsson *et al.* (2005) for grey seals.

Camera trap images of tigers are characterized by a wide range of camera angles and body posture. To allow similarity scores to be calculated between such images, we developed a three-dimensional surface model of a tiger. The software, first developed for matching images of grey seals (Hiby & Lovell 1990), fits the model to each new image and scans the stripe pattern from the region of the image lying beneath a predefined region of the model, so that the resulting pattern sample is largely unaffected by camera angle and body posture. A pattern comparison algorithm then calculates similarity scores between the new and existing pattern samples. Scanning the pattern via a three-dimensional model, in effect, unwraps it from the curved surface of the tiger's flank and thus also allows a camera trap image of a living tiger to match an image of its skin laid out flat.

Using camera trap images from the Nagarhole and Bandipur tiger reserves in Karnataka, India, we demonstrate the resulting reduction in effort required to generate capture histories from a large database of camera trap images. We also suggest that the software could be used as a forensic tool to trace the origin of

TAGS

Import of references

Drag and drop pdf files directly into Mendeley

Web Importer (best for single references and websites)

References from Databases with RIS (Web of Science, Medline etc).

Mendeley's search box - searches Mendeley's own catalog

Add references **manually**

Import to/from **other reference management programs** like Endnote and Zotero

Exercises

- Do the exercises 4-8 and number 10
 - Exercise 4: Import references from Google Scholar
 - Exercise 5: Import from library database soeg.kb.dk
 - Exercise 6: Import from bibliotek.dk
 - Exercise 7: Import from Web of Science
 - Exercise 8: Import from PubMed
 - Exercise 10: Organize your references into folders

Mendeley Cite

Insert citation

Insert reference list aka Bibliography

Select citation Style

Change Citation style (approx. 6000 pcs)

- **Author-date** [alphabetically by author and then year]
- **Numerical**

Suppress Author

Examples of Citation Styles

Author-date / Alfabetic

- Copenhagen University

Exercise

Exercise 13 - to use Mendeley Cite

1. Find *Mendeley Cite* under the References tab in Word
2. Use the *Insert Citation* button and insert references in your document
3. Use *Insert Bibliography* to insert the reference list into your document
4. Use the Style menu to change your citation style
5. Edit your reference with *Suppress Author* (an Author-date style must be used here)
